

## ABSTRACT OF THE DISCLOSURE

A moveable functional element such as a keyboard is provided  
5 for use with a mobile communication device. The element is  
constructed in two wing portions. When the cover is swiveled  
between closed and opened positions, the wing portions move  
relative to the body of the device and the cover between two  
positions, a retracted position in which the functional element  
10 is hidden and an extended position in which the functional  
element of the device is exposed for normal use.
